

# Full-time Authorising Engineer (Water) / Senior Consultant

An exciting opportunity has arisen to join a leading Independent Consultancy Practice in Water Quality and Safety Management.

HYDROP E.C.S. is an Independent Consultancy Practice, UKAS accredited, comprised of scientists specialising exclusively in the management of Water Quality and Safety, choosing firmly to remain independent, having no commercial interest in any water treatment or water hygiene companies. The practice is widely and highly respected and trusted, both in the UK and abroad. The practice's strategy is to maintain the market's recognition as the leading Consultancy Practice in the field of Risk Management of Water Quality and Safety through continuous training and development of all its staff, and to continue to provide major organisations with the most accurate, cost effective and unbiased advice. The company has steadily grown in size and stature since our inception in 1991, now proudly being considered as the 'go-to' company for specialist expert, independent and unbiased advice on *Legionella sp.* and *Pseudomonas aeruginosa* (and other waterborne pathogens) control within the UK and across Europe and the Middle East.

The position will suit an experienced, preferably degree-educated, Senior Consultant/Authorising Engineer (Water) with suitable qualifications and experience in delivering high-end consultancy advice for the management of risk of infection from waterborne infections, predominantly, in healthcare environments. The duties of the successful candidate shall include, but not be limited to, delivering the following services to the practice's client base:

- Authorising Engineer (Water)/Senior Consultant
- Management and Risk Control Systems Compliance and Governance Audits
- Risk Assessment Surveys for Legionella and Pseudomonas (including other waterborne pathogens)
- Crisis Management
- SUI/Outbreak Investigations
- Litigation and expert witness Work
- City & Guilds (C&G) and Institute of Leadership Management (ilm) Assured accredited and bespoke Training Courses
- Development of Management & Procedural Manuals and Documentation - Water Safety Plans and Policies
- Development and implementation of Pre-Planned Maintenance Programme Scheduling systems
- Development and implementation of Electronic Data Management, Reporting and Logging Programme systems
- Independent advice on appropriate Water Treatment Regimes
- Design Verification, Installation Compliance and Hand-over Management of new builds and major refurbishments
- Tender Specification Production & Tender Execution and Project management
- System Biological Analysis and results Interpretation
- Complete bespoke Project Management

The successful candidate shall possess good working skills with Microsoft Office and excellent oral and written communication skills. They must also be in possession of a clean UK full driving license and a satisfactory 'DBS' check which is necessary to fulfil client requirements.

The position attracts an excellent remuneration and benefits package.
